

# Your Connection to Deeper Drug Savings

It is estimated that

# 50%

of Americans do not consistently take long-term medications as prescribed.

Access to affordable medication leads to higher adherence and better health outcomes.

**INNOVATION**

**TECHNOLOGY**

The Liviniti SavePlus solution delivers behind-the-scenes added value and allows plan members to take advantage of low prescription prices. Using advanced technology, SavePlus searches for lower medication prices available in the market and applies that pricing to prescriptions. The drug search happens automatically at the point-of-sale, ensuring the process is fast, accurate and easy.

## Easy for Clients

No action is required to achieve the deeper savings made possible from the SavePlus program. Provided at no additional cost to Liviniti clients, the program is activated as part of a client's pharmacy benefit plan administered by Liviniti.

## Easy for Members

With SavePlus, plan members automatically receive the lowest available market price for their prescription medications at the pharmacy counter. The SavePlus program:

- Applies the prescription to the member's deductible and OOP when processed through the benefit plan.
- Applies the cash (non-insurance) price if it is the lowest-cost option.

## How It Works

Behind-the-scenes we search multiple networks, cash card vendors and drug pricing lists to find the best available price. This automated search happens in seconds and returns the best price for the drug when the prescription is submitted to the pharmacy.

## Pharmacy Intelligence in Action

Ongoing investments in technology and relentless innovation enable Liviniti to deliver new ways for clients and plan members to save real money.
